VESSEL STATUS AND TERMS OF CARRIAGE CODES (V-STAT TERM CARRIAGE)

GENERAL. The vessel status code identifies the type of shipping and payment agreement for a particular voyage while the terms of carriage code indicates who is responsible for vessel loading and unloading. The codes are used for statistical summaries, contractor payments, cost accounting, vessel operator billing, and related financial purposes. Container service codes that supplement the vessel status and terms of carriage codes are shown in position 15 and 16 of the TCN as explained in appendix CC-1, paragraph 10.

WATER COMMODITY CODES

1. **GENERAL**. The water commodity and special handling codes are a five-position combination. The first three positions of the code identify the commodity. The fourth position further identifies certain types of cargo and is used with the fifth position to indicate the nature of a commodity or item, which may require special handling. The specific special handling requirements are usually further identified in trailer data; e.g., actual temperature control range, type of hazardous materiel, or outsize dimensions.
2. **COMMODITY**. The first three positions of the five-position code indicate the commodity.
 - a. If a shipment unit is composed of items having different commodity codes, the code representing the greatest volume (cube) is used. When the items and commodities are so numerous no single code is dominant, a generalized code is used. These generalized codes include “NOS” (Not Otherwise Specified) in the explanation.
 - b. Whenever an “NOS” commodity code is used, additional explanation is always included as a trailer entry using DI T_9. This explanation is not a reiteration of the description shown in this paragraph (e.g., Subsistence, NOS; General, NOS), but may be a clear text description such as “Exchange Resale Items – Consolidated.” Certain of these items are described in specific detail as required by appendix CC-2.
 - c. Water commodity codes are grouped by general categories. These categories are alphabetically listed below along with the code groups, which may be used to determine a specific commodity code from the numeric listing below.

Code Group	Commodity Category

APPENDIX DD-13

WATER SPECIAL HANDLING CODES

1. **GENERAL**. The water commodity and special handling codes are a five-position combination. The first three positions of the code identify the commodity. The fourth position further identifies certain types of cargo and is used with the fifth position to indicate the nature of a commodity or item, which may require special handling. The specific special handling requirements are usually further identified in trailer data; e.g., actual temperature control range type of hazardous material, or outsize dimensions.
2. **COMMODITY**. The first three positions of the five-position code indicate the commodity.
 - a. If a shipment unit is composed of items having different commodity codes, the code representing the greatest volume (cube) is used. When the items and commodities are so numerous no single code is dominant, a generalized code is used. These generalized codes include “NOS” (Not Otherwise Specified) in the explanation.
 - b. Whenever an “NOS” commodity code is used, additional explanation is always included as a trailer entry using DI T_9. This explanation is not a reiteration of the description shown in this paragraph (e.g., subsistence, NOS; General, NOS), but may be a clear text description such as “Exchange Resale Items – Consolidated.” Certain of these items are described in specific detail as required by Appendix CC-2.
3. **SPECIAL HANDLING**. The fifth position of the five position code indicates those items which require special handling as a result of their size (outsized, any dimension exceeding 6 feet), weight (heavy lift, any piece 10,000 pounds or more), or need for security (classified or protected). (Note: Outsize and heavy lift refer to a single piece in its shipping configuration whether packaged, palletized, unitized, or containerized, but exclude SEAVANs and MILVANs themselves. Using column (1) or line (i) for items with a single handling condition and columns (2), (3), and (4) for multiple handling conditions; select a code from the following:

1	Not to be Assigned, Single Handling Condition

APPENDIX DD-14

WATER PORT IDENTIFIER CODES (WATER PORTS)

1. **GENERAL.** These codes identify water ports worldwide. The code representing the actual WPOE and WPOD is used on all DTS documentation for water shipments.
2. **CODE STRUCTURE.** The water port codes are based on the geographic location of the port. The letters used in the first two positions of the three-position code are generally assigned in alphabetic order, following the coastline. The first position of the three-position code represents the major geographic area in which the port is located. These geographic areas are described in detail in paragraph 3., below. The second position in the code represents a subarea within the major geographic area. The third position in the code represents the specific port, port area, or island within the subarea.

Major Geographic Areas. The following list identifies the major geographic regions of the world and the code associated with each. This code is the first position of the water port identifier code and should assist in locating the specific port code in paragraph 4., below.

APPENDIX DD-15

WATER TYPE CARGO CODE

1. **GENERAL**. The water commodity and special handling codes are a five-position combination. The first three positions of the code identify the commodity. The fourth position further identifies certain types of cargo and is used with the fifth position to indicate the nature of a commodity or item, which may require special handling. The specific special handling requirements are usually further identified in trailer data; e.g., actual temperature control range, type of hazardous material, type of hazardous material, or outsize dimensions.¹

2. **COMMODITY**. The first three positions of the five-position code indicate the commodity.

a. If a shipment unit three positions of the five position code is composed of items having different commodity codes, the code representing the greatest volume (cube) is used. When the items and commodities are so numerous no single code is dominant, a generalized code is used. These generalized codes include “NOS” (Not Otherwise Specified) in the explanation.

b. Whenever an “NOS” commodity code is used, additional explanation is always included as a trailer entry using DI T_9. This explanation is not a reiteration of the description shown in this paragraph (e. g., Subsistence NOS; General, NOS) , but may be a clear text description such as “Exchange Resale Items - Consolidated. ” Certain of these items are described in specific detail as required by appendix D, figure 12 (rp 54-79).

3. **TYPE CODE**. The fourth position of the five-position code identifies certain types of cargo, primarily those, which are hazardous. (When two or more codes apply to a shipment unit, the type of cargo code representing the- greatest -hazard (in the order of hazards from 49 CFR, when applicable) is used. An in-the-clear description of other applicable type of cargo codes is included in miscellaneous information trailer data (DI T_9). For example: A shipment “subject to damage from heat” and a “Poison Class B” is coded with a “P” for type cargo and “subject to damage from heat” is entered as miscellaneous trailer data (DI T-9).) Select a code from the following:

Cargo Code	Description
1	Aircraft engine internal combustion engines and fuel control devices
2	Type cargo code not applicable (for Air Force internal use)
3	Electronic Sensitive Device (ESD) (see Definitions)
4	Radioactive Material (no label required)

¹ MTMC will convert the water commodity code to the FSC and pass it to USTRANSCOM for DTS surface shipments as required.
